the 1990s, the number of people in the world who are under 15 years of age has increased from 1.1 billion to 1.5 billion. The number of people aged 65 and over has increased from 200 million to 350 million. The number of people aged 15–64 years has increased from 1.5 billion to 2.1 billion.

There are a number of factors which have contributed to the increase in the number of people in the world who are under 15 years of age. These include a decline in the death rate, a decline in the birth rate, and a decline in the age at which people are having children.

The decline in the death rate has been the result of a number of factors, including improvements in medical care, a decline in the incidence of infectious diseases, and a decline in the incidence of accidents and violence.

The decline in the birth rate has been the result of a number of factors, including a decline in the number of children that women are having, a decline in the age at which women are having children, and a decline in the number of children that are born to women who are not married.

The decline in the age at which people are having children has been the result of a number of factors, including a decline in the number of children that women are having, a decline in the age at which women are having children, and a decline in the number of children that are born to women who are not married.
